About the HF Policy Network

The HF Policy Network is a multidisciplinary group of politicians from across Europe working with patients, health professionals and other stakeholders to lead significant policy changes that may improve the lives of people with heart failure (HF)

Our members

Dr Mark Dancy, Cardiologist

Honorary MP Belgium)

Dr Ian Duncan (UK)

Prof Martin Cowie. Cardiologist

Prof Felix

Gutzwiller MP Switzerland)

Deputy Sean Kyne TD (Ireland)

enilla Gunther (Sweden)

Dr Cristian Silviu Busoi MEP (Romania)

Dr Stanimir Hasardiiev, National Patient Organisation (Bulgaria)

Hartshorne-Fvans. Pumping Marvellous (UK)

Sirpa Pietikainen, MEP (Finland)

Troisfontaines, Cardiologist (Belaium

Aldo Patriciello MEP (Italy)

leil Johnson,

for Preventive

Cardiology.

Ireland)

Dr Ursula

Marschall,

Barmer GFK

(Germany)

(Scotland, UK)

Dr José Ramón Juanatey, Cardiologist (Spain)

Tarabella MEP (Belgium)

Cristian MP (Romania)

Haycox. _iverpool University and Liverpool Health Economics (UK)

Pascal Garel HOPE

5 facts you probably didn't know about heart failure...

Heart failure

1 in 5 people are at risk of developing HF in their lifetime²

(HF) is a serious chronic condition where the heart cannot pump enough blood to support the needs of other organs in the body.1

5 The number of HF cases is expected to increase by 25% by 2030⁶

At present. 15 million people are living with HF in Europe³

3 HF is the leading cause of hospitalisation in people over the age of 654

Only 3% of people can correctly identify the symptoms of HF⁵

- Outcomes for HF patients are worse than for many forms of cancer⁷⁸
- The debilitating nature of the condition can impact on all aspects of life and increase patient's dependency on caregivers, which can lead to social isolation, anxiety and depression9

Call to action

Heart failure (HF) is a forgotten condition and few countries feature it in their cardiovascular health strategies. What's more, it is often considered a lost cause – when in fact appropriate diagnosis and care can make a huge difference to improving patient outcomes, avoiding unnecessary suffering by patients and decreasing costs for society.

With the number of people living with HF increasing rapidly, forward-thinking strategies are urgently needed to reduce the burden HF poses on our societies and ensure that every person with HF is offered the best-quality diagnosis and care possible.

We call upon governments across Europe to commit to improving the lives of people living with HF by focusing on the following priority actions:

Make HF a national priority

National HF strategies with measurable goals

Every country should feature HF as a major condition within their cardiovascular disease and chronic disease strategies.

Public awareness campaigns

Ministries of health should work with public health authorities, professional societies and patient organisations to help people recognise the signs of HF and encourage them to seek appropriate care.

Data-driven resource planning

Ministries of health should invest in reliable data collection to guide improvements that will make the biggest difference to patient outcomes and make the best use of available resources.

Ensure timely diagnosis and prevention in those at risk

Professional training

All healthcare professionals who are in contact with people at high risk of HF should receive specific training in HF diagnosis and management.

Availability and reimbursement of diagnostics

National healthcare systems should provide appropriate reimbursement for guidelinerecommended diagnostics and ensure their widespread availability in hospital and relevant community settings.

Deliver multi-disciplinary, person-centred care

A standardised HF pathway that reflects clinical guidelines

All patients with HF, regardless of where they are treated, should be offered high quality care consistent with ESC guidelines (or national equivalents) delivered by a specialist-led multidisciplinary team.

A dedicated contact for follow up care

Patients hospitalised for HF should leave the hospital with:

- A clear discharge plan which reflects individual patient needs and circumstances
- A dedicated contact for follow up care
- An appointment to see an HF specialist within 2 weeks of discharge.

A person-centred care plan

All patients with HF should be offered a personalised long term care plan to help them self-manage their condition.

Invest in tools and resources in primary care

Workforce planning in primary care

Governments should evaluate existing professional capacity in primary care to ensure dedicated professionals are available to provide comprehensive care to people living with HF.

All nurses should receive training in HF and, where appropriate, **HF specialist nurses should be officially recognised** as a profession.

10

Investment in innovative tools that promote self-care

Governments should invest in the implementation of tools which may enable patient self-care and reduce avoidable hospital admissions (e.g. patient monitoring devices).
